

Dear Esteemed Members of the Energy Committee:

I urge you to strengthen HB 5427 so that the solar program in our state can move beyond the pilot stage and move forward to unlimited solar energy production without limitations on the number of projects or the total amount of megawatts produced. We need authorization for unlimited shared solar development now.

The pilot program is inadequate and we lag behind other states in solar development.

We need to ACT now because we are losing time in the battle to reverse global warming.

We need to ACT now because of the need for all of us to breathe clean air, especially the most vulnerable among us in the highly polluted urban areas.

We need to ACT now to bring badly needed jobs into our state.

Thank you

Joseph Wasserman
